

MY WHOLE EARTH ACADEMY

Hurray for Summer Camps! Let's Be **EARTH DETECTIVES!** 

Join us for an enriching 8-week adventure as we delve into the fascinating evolution of our planet Earth! At our camp, children will immerse themselves in exploring various habitats and uncovering the secrets of different life forms.

Each week, we'll focus on a new group of organisms, examining their diets, habitats, and unique characteristics. From understanding how they build their homes to exploring their methods of communication, children will engage in hands-on activities and discussions to deepen their understanding of Earth's biodiversity.

Let's embark on this journey together, ignite curiosity, and foster essential skills for lifelong learning!

Here's the Summer Schedule of Inquiry!

- July 2 - 5** **FUNGUS AND BACTERIA** – Life started out pretty simple!
- July 8 - 12** **CRUSTATIONS, SPONGES AND CORAL** – The oceans started teaming with life!
- July 15 - 19** **FISH, SNAILS, SQUID AND JELLY FISH** - It got more complicated!
- July 22 - 26** **PLANTS & INSECTS** - And life started spreading on the land!
- July 29 - Aug 2** **REPTILES AND AMPHIBIANS** - More creatures decided to come ashore!
- Aug 6 - 9** **DINOSAURS** - And everything got really, really, big for awhile!
- Aug 12 - 16** **BIRDS** - And they changed in many different ways!
- Aug 19 - 23** **MAMMALS** - And they kept changing to adapt to the ever-changing Earth!
